[doug@teleosmarketing.com](mailto:doug@teleosmarketing.com)**EMist to reveal a breakthrough disinfectant sprayer.**

**Fort Worth, TX** - EMist announced today they will introduce the [EPIX360](#), a revolutionary handheld disinfectant sprayer, at ISSA 2019. The EPIX360 is an electrostatically charged sprayer that provides more coverage, less waste, and better results.

The EPIX360 is a powerful, efficient, and cost-effective disinfectant application system. The patented system places an appropriate electrostatic charge to disinfectant as it leaves the spray nozzle, giving each droplet a powerful attraction to its opposite charge. High-touch point areas such as desks, tabletops, chairs, door handles, cabinet handles, light switches, and more are effectively covered. EPIX360 helps stop the unnecessary spread of infections through cordless, mobile, and effective application.

“We are thrilled to introduce the EPIX360 at ISSA 2019 before its public release in early 2020,” said George Robertson, CEO, EMist. According to Robertson, “The EPIX360 will help prevent the spread of infection with its revolutionary technology.”

EPIX360 can be used in:

- **Care Clinics:** To keep patients and staff safe from pathogen transmission and sickness by effectively and efficiently disinfecting after each patient visit.
- **Emergency Medical Services:** Safeguard patients and EMS personnel after every patient transport to eliminate dangerous pathogens.
- **Education:** Prevent the spread of bacteria to keep your children protected from an unnecessary outbreak of the flu this year.

The EPIX360 will be available at an introductory price of \$995 at the ISSA Conference in Las Vegas, booth 1900. This will be the first reveal and an exclusive pre-order opportunity for the EPIX360 handheld sprayer. Once the pre-order closes, the unit will maintain a price of \$1,495 MAP.
